

VICTOR A. CROSBY, M.D.

REFRACTION POLICY

A refraction is a measurement of the lens power necessary to prescribe glasses or corrective lenses. Most medical insurance plans, including Medicare, DO NOT cover routine refraction's or routine eye examinations (when no medical eye problem is known or suspected). Medicare, and most medical insurance plans, allow that we charge separately for that portion of the examination, since it is not a covered service.

If you have any questions regarding Medicare, insurance policies, and procedures, please do not hesitate to ask. We will do our best to assist you.

By signing this I understand that I am responsible for the refraction charge of \$40.00 that is stated in the above policy.
